

# America's Boating Club® Seminars

## Teaching Marine Navigation (Piloting) On-line

Where: On-line via Free Conference  
Call

When: District 5 On-line Conference  
0900 - 1000,  
November 6, 2020

Our Marine Navigation (Piloting) courses introduce Nautical Charts and teaches students the manual tasks of accurately plotting a course plan. Often instructors will work side by side with students to demonstrate how plotter tools and dividers are used. Those normal classroom techniques are not possible due to the Covid-19 pandemic. Instructors must become proficient working with students through internet communications tools.

This seminar describes the practical steps the squadron made to successfully teach Marine Navigation utilizing the Zoom tool.

The seminar includes information on::

- What happened when Covid struck and shut down the face to face lessons for Piloting
- A review of the communications tools considered and why Zoom was selected.
- How software was configured and why.
- What teaching method was employed, what did we modify, what worked, things we learned

**Important information for all instructors.**

**Intended for instructors who teach Marine Navigation  
and Advanced Marine Navigation.**

We look forward to seeing you in this Seminar. If you have any questions, Please do not hesitate to contact the DEO or ADEO. Your Educational Department team welcomes the opportunity to be of service.
